Research and Leadership Experiences

Senior Design Project - Chief engineer / Deputy program manager and Layout

Group design of a complete flight vehicle of a four-engine military cargo airplane given a mission statement and specifications. The chief engineer / deputy program manager conducts program reviews with the team and monitors engineering process, rearranges power to cure project shortfalls, assures the execution of the schedule, and is responsible for the successful completion of the project. Also responsible for the final layout and model of the aircraft, which are drawn using both AutoCAD and Inventor.

Fall 2010 - Current

DotA Commentaries Community – Co-founder, Advisor, and Administrator

Co-founder of dotacommentaries.com, a source of video commentaries on the professional DotA gaming scene. Also includes video guides, interviews with professional gamers, and tournaments, competitions, and a forum. Project management with commentators, programmers, and moderators. Teamspeak server administrator and advisor for the growth of the website. Approximately 50,000 unique visitors per month.

2009 - Current

Chaotic World server – Lead senior developer and Administrator

Lead senior developer and server administrator for a persistent world server with over 5,000 registered users and with about 120 players actively logged on during peak hours. Developed the module using NWScript, which is similar to C and Java and is the scripting language of the Aurora toolset. Maintained community feedbacks to fix bugs, improve current gameplay and PvE and PvP balances, and add new contents to the server.

2007 - 2009

Undergraduate Research – Assistant researcher

Worked at Georgia Institute of Technology's Computational Combustion Laboratory. Modeled complex dynamics in turbulent flow using Gridgen, a commercial mesh generator.

Spring 2007

Work Experiences

Nippon Telegraph & Telephone Corp. - Intern

Created web applications that utilized 3rd party API for service linkage system that reflects session information between users. Used AJAX (PHP, JavaScript, and SQL) to communicate and exchange real-time information between the client, API service, database, and the web server to maintain synchronized sessions between multiple clients.

The final project used Google Maps API to allow multiple clients to view a synchronized map, which continuously updates to respond to a client's modification, such as coordinates, zoom level, and even Street View camera orientation. The application had a permission and privacy setting and required no additional web plugin to run.

Summer - Fall 2009

Tokyo, Japan

Awards and Scholarships

Dean's List

HOPE Scholarship

John Staton Scholarship

Computer and Language Skills

Java, C++, Python, AJAX, SQL, PHP5, HTML5, CSS3, XML, and JavaScript.

MATLAB, AutoCAD, and Inventor.

Windows OSs, Mac OS X, and Linux OSs.

Many major applications such as Microsoft Office, Adobe Creative Suite, and Final Cut Studio.

Language level: advance Chinese, advance Japanese, and intermediate German.
